Assignment 1.

CamScanner

DATE: __/__/____

Exercise 2.9: Process Architecture: (Consultancy Firm)

Step 1: Case Types:

A case type is the thing the work is done on. The text says acquisition concerns projects rather than client, so case types are defined by service type.

#	Case Type	Reason
1	Consultancy Project	First services of the firm
2	Outsourcing Project	Second Service, executed differently
3	Interim Management project	Third Service
4)	Supportive Service Request	Request to the services department (research, consultancy)

Existing and new clients are not separate case types, because acquisitions is project-based for both - The only difference is that a framework contract is set up only for new clients

Step 2: Functions:

Activities extracted from the

DATE: __/__/____

-text and grouped

Acquisition (networking):-
Partners look for projects at network events.

Intake :-
When a client show interest, wishes are inventoried on the intake form.

Framework contract establishment:-
During intake, new clients only.

Regular Client meeting:-
Existing clients only, relationship management.

Project Team Creation:-
After the assignment is given.

Kick-off Meeting:-
With the client, the same for every type.

Project Execution:-
Differs largely per service type.

Project Evalution:-
Evalution meeting at the end, for quality control.

Market Research:-
For consultants.

Car leasing:-

Secretary Services:-

DATE: __/__/____

Step 3:- Case/Function Matrix:-

Function	Consultancy	Outsourcing	Interim Mgt	Support Request
Acquisition	X	X	X	
Intake	X	X	X	
Framework Constrait	X	X	X	
Regular Meeting	X	X	X	
Team Creation	X	X		
Kick-Off	X	X		
Execution	X	X		
Evaluation	X	X		
Market Research				X
Car Leasing				X
Secretary Servie				X

Step 4: Identifying Processes:-

The rule is that the whole matrix starts one big process, and it is split only when a guideline applies:-

Split 1: Acquisition And Relationship Management Seprated:-

Guideline 1:- The flow objects differ- Acciqui stion works on a "project opportunity" while regular meetings works on a "client relationship".

Guidlline 4:- there is a sepration in time- Intake happens once per new quest,

DATE: __/__/____

while regular meetings are periodic.

Split 2: Acquisition And Project Execution Separated:-

Guideline 3:- The transactional state changes. Acquisition is the initiation/negotiation state and once the project team is created, the execution state begins.

Split 3:- Consultancy And Outsourcing Execution Separated:-

Guideline 6:- There is a logical separation in another relevant dimension (service type). The text says execution "differs largely per type", so the processes must be performed differently.

Split 4:- Support Functions Separated:-

Guideline 1:- The flow objects differ (research request, car lease, secretary object) and are completely different from project cases.

Where I did not Split:-

Acquisition is not split by service-type, because the procedure and intake form are the same for all three types. (Guideline 6 does not apply).

DATE: __/__/____

Team Creation, kick-off and evaluation stay with execution, because they all follow one project plan and share the same flow object.

Guideline 8 does not apply, because interim management has as many acquisition function as the other types.

Final Process Architecture:-

Type	Process
Core	1. Project Acquisition
Core	2. Client Relationship Management
Core	3. Consultancy Project Execution
Core	4. Outsourcing Project Execution
Support	5. Market Research
Support	6. Car leasing Management
Support	7. Secretarial Services
